
Oracle Agile 9.3.3 Product Collaboration

Duration: 3 Days

What you will learn

The Agile 9.3.3 Product Collaboration (PC) course is designed to teach the functions of Agile Product Collaboration. Using instructor demonstration and hands-on labs, you will learn how to create Items, create variant BOM models, and use the Approved Manufacturer List (AML).

Learn To:

- Understand the change control process.
- Redline Bills of Material (BOMs).
- Manage attached files.
- Understand object relationships.
- Use reports and create new report layouts.
- Use the bulk change feature.
- Redline a BOM via an ECO.
- Add affected items to and ECO.
- Create an Engineering Change Order (ECO).

Benefits

By investing in this course, you'll walk away with a deeper understanding of the how the change process works in Agile.

By working with expert Oracle University instructors and participating in hands-on exercises, you'll solidify your learning so you can apply it to your daily job.
