**Oracle Agile 9.3.3 SDK & Process Extension****Duration: 2 Days****What you will learn**

The Agile 9.3.3 Software Development Kit (SDK) & Process Extensions (PX) course teaches students how to write short processes using the Agile SDK such as logging in, creating searches, creating items, adding attachments, etc. The course also covers Processes Extensions that allow developers to invoke customized interactions from objects within the Agile system. Furthermore, the course teaches student how to set up Events that either trigger custom Notifications or automation scripts similar to Process Extensions.

**Audience**

Functional Implementer, Project Manager

**Course Topics****Using the SDK****Working with Agile Process Extensions (PX)****Working with Events, Notifications, and Scripting**
